Professional Summary

Full Stack Engineer with strong experience designing and implementing API-driven integrations across fintech, identity, and enterprise platforms. Proven ability to translate customer requirements into scalable integration solutions, deliver technical demos, support sandbox testing, and troubleshoot API workflows. Experienced in working with REST APIs, authentication systems, ERP/CRM integrations, and customer-facing technical engagements.

Experience

Elstack Technologies — CTO

2025 — Present

- Built a multi-service fintech platform integrating with multiple service providers (billing, payments, utilities)
- Designed and implemented:
 - Payment gateway integrations
 - API orchestration across providers
 - Transaction validation and reconciliation flows
- Developed secure REST APIs for third-party consumption
- Led integration testing, error handling strategies, and API monitoring
- Built event discovery and management platform with:
 - Payment gateway integrations
 - Google Analytics 4 (GA4) tracking for user behavior and conversion
- Implemented:
 - Location-based services and event discovery APIs
 - External integrations for payments and analytics
- Designed scalable backend services and mobile app integrations (React Native / Expo)

Biosec Solutions — Chief Technology Officer (CTO)

Sept. 2023 — July. 2025

- Lead architecture and delivery of identity verification and biometric systems, integrating with partners such as Idemia, Neurotechnology, and National Identity Management Commission (NIMC).
- Drive API integrations with enterprise platforms, including:
 - Salesforce
 - Zoho
 - Google Analytics 4 (GA4)
- Act as technical lead in pre-sales engagements:
 - Conduct solution walkthroughs and integration demos for partners and clients
 - Translate business requirements into API integration workflows
 - Support RFPs, technical documentation, and solution proposals
- Design and document integration architectures, data flows, and API contracts
- Support clients during sandbox and production integration, troubleshooting API calls, authentication issues, and payload validation
- Improved biometric authentication performance by 30% through optimization of algorithms and system architecture
- Collaborate across engineering, product, and external stakeholders to ensure compliance with identity and data protection standards

Pixel Plus — Full Stack Developer

Apr. 2022 — Dec. 2022

- Designed and implemented RESTful APIs to support a job marketplace platform, including user onboarding, job listings, applications, and search workflows
- Integrated frontend and backend systems, ensuring clean API contracts, consistent payload structures, and efficient data exchange (JSON)
- Worked closely with stakeholders to translate business requirements into technical solutions, improving system usability and scalability
- Optimized API performance and database queries, reducing response times and improving overall system reliability
- Implemented error handling and validation strategies to ensure consistent API responses and easier troubleshooting for client-side integrations
- Supported integration testing and debugging, using tools like Postman to validate endpoints and simulate real-world usage scenarios

- Collaborated with cross-functional teams to ensure smooth integration between frontend applications and backend services

Fiatswap — Full Stack Developer

Jan. 2021 — Feb. 2022

- Developed a multi-currency fintech platform, integrating with external financial services for payment processing and fund transfers
- Built and maintained secure REST APIs, implementing authentication mechanisms (JWT, API keys) and enforcing data protection best practices
- Integrated third-party services to enable cross-border transactions and real-time payment processing workflows
- Designed and implemented transaction validation, reconciliation logic, and error-handling mechanisms for financial operations
- Supported API consumers (internal and external) by troubleshooting integration issues, analyzing logs, and resolving failed transactions
- Used Postman and logging tools to debug API calls, inspect payloads, and identify integration bottlenecks
- Contributed to CI/CD pipelines, ensuring reliable deployments and minimizing downtime for API-dependent services
- Collaborated with product and business teams to align technical implementation with financial use cases and compliance requirements

PAT Ride — Full Stack Developer

Aug. 2018 — Dec. 2020

- Built a ride-hailing platform with end-to-end integration of mobile apps, backend services, and payment gateways
- Developed GraphQL APIs to efficiently serve mobile clients, enabling flexible data querying and reducing over-fetching
- Integrated payment gateways to support secure rider-driver transactions, including fare calculation and payment confirmation flows
- Designed and implemented real-time matching algorithms connecting riders to drivers based on location and availability
- Developed backend services handling trip lifecycle events, transaction processing, and user data management
- Implemented robust error handling and fallback mechanisms for payment and ride-processing failures
- Worked with mobile developers to ensure seamless API consumption and consistent user experience across platforms

- Monitored and optimized system performance, improving API response times and system scalability under load

EDUCATION

Bachelor of Information Technology
Middlesex University, Dubai (2015 – 2018)

Technical Skills

Integration & APIs

- REST APIs, GraphQL, Webhooks
- JSON, XML
- OAuth, API Keys, Authentication flows
- Postman, API testing & debugging

Languages & Frameworks

- Java, Python, JavaScript, TypeScript
- Spring Boot, Node.js, Django

Frontend & Mobile

- React, Next.js, Vue.js
- React Native, Flutter

Databases

- PostgreSQL, MySQL, MongoDB, Oracle

Cloud & DevOps

- AWS, Docker, Kubernetes
- CI/CD pipelines

Messaging & Realtime

- WebSockets, RabbitMQ, Redis

Tools

- GitHub, Figma, Mocha, Chai
